

SIS Liberty

There are a lot of software products that would benefit your school – and your students – if only they could access the appropriate subsets of your student data. But giving control to commercial interests endangers privacy.

Liberty runs on a server directly within your school or district.

You decide whether or not a particular external application can access student data, and if so, then exactly what parts of it.

You have complete control for a simple reason:
it's your school and your data.

Rubrix

Rubrix enables teachers to perform mobile, objective student assessments; including the creation of media rich rubrics.

Students gain valuable feedback concerning their performance that shallow numbers and percentages of other gradebook programs simply don't provide.

Rubrix can also be used for teacher evaluation, safety/security audits, and more! Create custom rubrics to use for virtually anything you can imagine, or choose from a library of rubrics to suit your situation.

Principalm

It's hard to lead from behind a desk. School administrators like you need mobility, and accessible student data no matter where or when – independent of networks and desktops.

Principalm gives you offline access to your student information on your mobile device so that you are prepared for any situation.

Anytime, anywhere access.

Teacherpalm

Teacherpalm provides a view into relevant student data which is customized for individual teachers. Each teacher can see detailed information for the students they teach, and limited data about other students and colleagues at their school.

Student data is presented on a teacher-friendly interface that keeps important information up-front and easy to access.

Discovery Software believes that education is ultimately dependent upon communication between people: students, parents, teachers and school administrators. We have developed a collection of products that focus on the central idea of connection by making better use of your SIS data and enhancing student and teacher evaluation.

Product Overview

Our Products Work Together:

Your SIS (Student Information System) contains valuable information. Software such as Principalm, Teacherpalm and Rubrix can let you use that data in new ways.

But first: that data has to be extracted from your Student Information System (SIS). Discovery has developed **Bridges** that read data from about 100 different SIS's.

Bridges translate the SIS data into a standardized format used by **SIS Liberty**. SIS Liberty runs on a server in your school/district – so your school's data stays in your control.

SIS Liberty is “middleware” that interfaces your SIS to other applications. Using SIS Liberty, YOU decide which applications should receive WHAT data via **Provider Plugins**.

Principalm and **Teacherpalm** read SIS Liberty's generalized data base, then encrypt and store copies of your SIS data on your smartphone or tablet. The result? You get mobile access to student data anytime, and anywhere – even without internet!

Soon, SIS Liberty will be able to populate **Rubrix** with class lists; it saves a lot of time otherwise spent on data entry.

Discovery Software can also build new Provider Plugins to connect with **other applications** written by other companies.
